

MIX INSIGHT REPORTS™

The business intelligence tool for FM-Web from MiX Telematics

Introduction

The success of advanced fleet management and telematics solutions is often determined by the level of benefits customers can gain from the data provided by their onboard computers. Customers expect access to this data in an easy to use and easy to understand manner that provides meaningful information about their drivers and vehicles.

To meet this demand, MiX Telematics developed a sophisticated business intelligence tool: MiX Insight Reports. MiX Insight Reports forms part of FM-Web, the Internet based fleet management system from MiX Telematics.

The primary purpose of MiX Insight Reports is to provide better access to customer data that is stored in a powerful data warehouse and presented in an intuitive and compelling interface. These new features enable FM-Web customers to leverage both real-time and historical fleet information, thereby managing vehicles and drivers even more effectively and efficiently.

By providing comprehensive insights into customers' data, MiX Telematics truly delivers added value to its customers' operations.

What makes MiX Insight Reports so unique is the advanced visualisation techniques and user-friendly capabilities to summarise, arrange and format reports. Customers can easily drill down and drill through to different levels of reporting as well as schedule reports for electronic delivery in a wide range of formats. MiX Insight Reports comes with industry-leading GeoSpatial features which allow fleet owners to quickly analyse their vehicles' trips and events by country, town and street over extended periods of time.

FEATURES

BENEFITS

✓ Advanced visualisations	MiX Insight Reports offers features such as tooltips, conditional formatting, trend analysis using spark lines and many more cutting edge visualisation techniques.
✓ Advanced chart types	The new reports present customers with more than 30 different chart types including standard pie and bar charts; polar, scatter, range, area and combination charts where applicable.
✓ Extended date range reporting	Depending on the contract the Mix Telematics Reports can include data from extended periods of time, even spanning years, with very few exceptions.
✓ Drill through and drill down	Customers can look at overview and summary reports and then drill down and drill through to different levels of reporting.
✓ Report automation	All reports can be scheduled for electronic delivery and report data is provided in a variety of formats including excel, pdf, csv and word files.
✓ Exciting GeoSpatial abilities	By making use of geospatial data features MiX Insight Reports allows fleet owners to analyse their vehicles' trips and events by country, town and street.
✓ Reporting by exception	Exception reporting allows customers to easily pick up anomalies in their fleets. By providing trend analysis, MiX Insight Reports enables users to quickly pinpoint exceptions.
✓ Report customisation as a service	Report customisation is a new commercial service for customers and channel partners that offers customised enhancements to existing reports and development of new reports in a timely fashion.
